

PGY-2 Psychiatry Pharmacy Residency (2015)

Objectives

The primary purpose of the Psychiatry PGY-2 specialty residency is to provide training to become a well-rounded psychiatry clinical pharmacy specialist who gains leadership and clinical skills and provide the necessary competencies to enable attainment of board certification in psychiatry pharmacy.

Accreditation

ASHP pre-candidate status

Facilities

The VA Medical Center in Portland is the primary training site for this residency program. Resident may travel to Vancouver CLC and CBOC for rotations.

Responsibilities

Residents will provide patient care as members of interdisciplinary team and provide patient-centered medication therapy management. They will gain clinical experiences in a variety of areas including outpatient and inpatient psychiatry, neurology, substance abuse, and geriatrics care. Additionally they will gain experiences in research and teaching.

Core and longitudinal rotations are designed to maximize the resident's learning experience. Core rotations include working in the inpatient, outpatient and long-term care environments. The PYG-2 also works with interprofessional treatment teams in outpatient mental health clinics as a longitudinal experience throughout the year. Other required longitudinal rotations include administration, academia, clozapine treatment team, and research. Additionally, each resident will have opportunities for elective opportunities.

Eligibility

Applicants should have a Pharm.D. and be a United States citizen and have successfully completed a PGY 1 residency prior to starting this program.
