Clinical Psychology Internship
2016 - 2017

Veterans Affairs Health Care System
Portland, Oregon
Welcome

The Training Committee at the VA Portland Health Care System (VAPORHCS) appreciates your interest in our predoctoral psychology internship. Accredited by the American Psychological Association’s Office of Program Consultation and Accreditation since 1978,* the internship continues a strong commitment to fostering clinical skills and professional identity in interns. VAPORHCS psychology staff values collegial working relationships with interns as well as the opportunity to teach and provide supervision.

In addition to the benefits of the training program, living in the Greater Portland Metropolitan Area offers the best of urban and outdoor life. Portland is an extremely livable city, replete with restaurants, music, shopping, and natural beauty. In Portland it’s literally possible to take a morning ski run on Mt. Hood’s glacier, windsurf in the Columbia during the afternoon, and catch dinner and theatre downtown in the evening. We hope you enjoy living here as much as we do.

Thank you for considering VAPORHCS for your predoctoral psychology internship. We look forward to reviewing your application.

Sincerely,

Marilyn Huckans, Director of Training for Psychology

Psychology Training Committee:
Chris Anderson, Darin Bergen, James Boehnlein, Julie Burnett, Ines Campoverde, Bret Fuller, Elizabeth (Betsy) Goy, Jennifer Hightower, Doug Park, Dan Storzbach, Sarah Súñiga, Malinda Trujillo, Ruth Ann Tsukuda, Amy Wagner, and Kate Woodside

About Us

The Veteran Affairs Portland Health Care System (VAPORHCS) is an attractive and vital health care center. In addition to comprehensive medical and mental health services, VAPORHCS supports ongoing research and medical education. VAPORHCS is connected to OHSU structurally by a beautiful sky bridge and functionally by shared staff, trainees, and educational opportunities.

The Vancouver, Washington division of VAPORHCS is located just across the Columbia River. This spacious campus houses long-term rehabilitation programs, a skilled nursing facility, a substance abuse treatment program, a PTSD clinic, a post-deployment clinic, and primary care.

Additional community based outpatient clinics (CBOCs) are located at other locations such as Hillsboro, East Portland, and West Linn.

VAPORHCS values diversity in our staff. As an equal opportunity training program, the internship welcomes and strongly encourages applications from all qualified candidates, regardless of racial, ethnic, religious, sexual orientation, disability, or other minority status.
Training Program

Overview

VAPORHCS continues a long-standing commitment to predoctoral psychology training. The Psychology Internship Training Program has been fully accredited by the American Psychological Association (APA) since 1978. Programs and training activities described in this brochure reflect the psychology staff’s roles within the current organization of the Health Care System. We offer seven internship positions for the 2016-2017 training year.

VAPORHCS psychology staff consists of over 50 clinical psychologists with the majority holding faculty appointments in the Department of Psychiatry at the Oregon Health & Science University (OHSU). More than 35 of these psychologists are directly involved in the internship training program. Settings across both campuses afford staff the opportunity for clinical practice, training, research, and administration. Psychology, psychiatry, social work, nursing, and other disciplines have a collaborative relationship throughout VAPORHCS. Interns frequently work as part of multidisciplinary teams in addressing patient needs.

National VA guidelines designate this as a one-year, full-time, 2080 hour internship, including federal holidays, vacation, and sick days. The 2016-2017 internship training year will begin on June 27, 2016.

Philosophy of Training

The number one priority of the VAPORHCS internship program is to provide students with a positive, supportive training experience. Interns work reasonable hours, are provided ample supervision and didactic opportunities, and are treated as junior colleagues by the psychology staff. Professional development is a primary focus of our training, as we assist interns in transitioning from graduate school to a professional career. Our intent is to prepare students by the end of the internship year for entry-level professional positions or additional postdoctoral training. We follow a generalist model, focusing on skills of assessment, treatment, and consultation with diverse patient populations. In addition to developing professional competence, we expect interns to develop their own professional identity during the training year. This includes integration of professional and ethical behavior with articulation of one’s preferred theoretical orientations, development of clinical specialties, or focused research endeavors.

The VAPORHCS internship believes that clinical practice should be influenced by the science of psychology, and vice versa. Therefore, we support clinical practices that are consistent with current scientific research literature, while also considering the variables found in real practice. We hope to develop psychologists who are capable of contributing to the professional literature through their own clinical research.

Throughout the internship, attention is given to the intern’s professional development in the role of psychologist. This includes valuing patient welfare, assuming individual responsibility, demonstrating professional competence, and making ethical decisions. As a result, the VAPORHCS seeks interns who have solid clinical skills, the drive to work independently, and the ability to interact collegially with other psychologists.
Each intern is provided with a preceptor – a psychology staff mentor who offers information and support throughout the year. During the first week, interns meet with their preceptors to develop a training program that will augment their existing strengths and address gaps in training as generalist psychologists. Factors considered during this process include the intern’s career goals and previous preparation.

The goal of the internship is to provide interns with the following experiences they may not have had in previous training: 1) experience with a variety of patient populations (e.g., older adults, women Veterans); 2) breadth of experience working with different diagnoses (e.g., PTSD, substance use disorders, psychotic spectrum disorders); 3) ability to provide professional consultation and effective treatment in a variety of clinical settings in collaboration with diverse professions; and 4) ability to plan, conduct, and write psychological assessments (to be evaluated by review of two written assessment reports provided as work samples prior to the beginning of internship). Together, interns and their preceptors will complete a form outlining a preferred rotation combination that will be submitted to the Training Committee to assist with the rotation assignment process. Ultimately, rotation assignments will be made based upon preceptor recommendations, intern training needs, rotation coverage needs, and intern preferences.

**Structure of the Internship**

Because we believe that full-time immersion allows greater in-depth learning in a particular specialty area, each intern participates in three, four-month long full-time training rotations. Rotations offered include Health Promotion and Recovery, Health Psychology, Neuropsychology, Outpatient Mental Health, Posttraumatic Stress Disorder Clinical Team, Rural Tele-Mental Health and Substance Abuse Treatment Program. Each setting provides training in treatment and assessment within the generalist model, as well as clinical work with special populations or unique problems.

Intake and/or assessment opportunities are available across all rotations. Generally, assessment cases and supervisors will be assigned to match the rotation training experiences. For example, Interns on the Mental Health Clinic rotation conduct assessments through the Psychological Assessment Clinic which accepts referrals from providers within the mental health division. Health Psychology interns take referrals from general medical and medical specialty providers, and Neuropsychology Interns accept referrals for cognitive assessments from a wide range of mental health, medical and specialty providers.
Research

Supervised clinical work is the main focus of training; however, up to four hours may be used each week for research and counted toward training hours. The training program strongly supports interns finishing their doctoral requirements; thus, interns who have not completed the dissertation are required to utilize these hours for dissertation completion. Interns who have completed the dissertation may request to use this time for other research projects. Research hours during the work week must not interfere with clinical work and are contingent upon satisfactory progress in clinical training and demonstrated research productivity. Requests for research hours must be submitted in writing and approved by the Training Committee at the beginning of each rotation.

Stipend & Benefits

The stipend is currently $25,274 for the internship year. Benefits include health and life insurance (intern pays part of premium; available to same gender partners), paid holidays, paid vacation and sick leave, free access to VAPORHCS and OHSU libraries, and use of the Employee Fitness Center. Interns with children have access to low-cost child care located on the Portland Campus (provided there are openings) and have qualifying status for a VA child-care subsidy program.

Eligibility

A candidate for this predoctoral internship must have all required course work completed prior to beginning the internship. Preferably, candidates will have completed the major qualifying examination for the doctorate and have only minor dissertation requirements remaining. In all cases, it is expected that an intern has had a substantial amount of supervised clinical experience. An applicant with fewer than 1200 hours of practicum experience or fewer than 12 integrated (cognitive and personality) assessment reports is unlikely to be prepared for our setting.

In accordance with APA philosophy and VA policy, this internship is also offered to doctoral level psychologists who have returned to school to respecialize in clinical or counseling psychology. The applicant must be enrolled in an APA-approved clinical or counseling program, show documentation of adequate didactic and practicum preparations, and be approved for an internship by his/her Director of Clinical Training.

ELIGIBILITY REQUIREMENTS FOR ALL VA TRAINING PROGRAMS

1. U.S. citizenship. VA is unable to consider applications from anyone who is not currently a U.S. citizen. Verification of citizenship is required following selection. All interns and fellows must complete a Certification of Citizenship in the United States prior to beginning VA training.
2. A male applicant born after 12/31/1959 must have registered for the draft by age 26 to be eligible for any US government employment, including selection as a paid VA trainee. Male applicants must sign a pre-appointment Certification Statement for
Selective Service Registration before they can be processed into a training program. Exceptions can be granted only by the US Office of Personnel Management; exceptions are very rarely granted.

3. Interns and Fellows are subject to fingerprinting and background checks. Match result and selection decisions are contingent on passing these screens.

4. VA conducts drug screening exams on randomly selected personnel as well as new employees. Interns and Fellows are not required to be tested prior to beginning work, but once on staff they are subject to random selection for testing as are other employees.

ADDITIONAL ELIGIBILITY CRITERIA FOR INTERNSHIP

Internship applicants also must meet these criteria to be considered for any VA Psychology Internship Program:

1. Doctoral student in good standing at an APA-accredited graduate program in Clinical or Counseling psychology. Persons with a doctorate in another area of psychology who meet the APA criteria for respecialization training in Clinical or Counseling Psychology are also eligible.

2. Approved for internship status by graduate program training director.

ELIGIBILITY FOR VA EMPLOYMENT

To be eligible for employment as a VA Psychologist, a person must be a U.S. citizen and must have completed an APA-accredited graduate program in Clinical or Counseling psychology AND must have completed an APA-accredited internship in Psychology, with the emphasis area of the degree consistent with the assignment for which the applicant is to be employed. The only exception is for those who complete a new VA internship that is not yet accredited.

Diversity at the VA Portland Health Care System

The VAPORHCS values diversity in our staff. The psychology service’s efforts toward multicultural and diversity competencies remain a work in progress, and we strive toward continued reflection and improvement. The Director of Training, Training Committee, Supervisors, and other staff aspire toward disclosing and welcoming diversity in the workplace, and the psychology service recognizes a need to continually evaluate and educate ourselves as we work toward this goal. In 2011, the VAPORHCS psychology staff initiated a Multicultural and Diversity Task Force to undertake a far-reaching examination of ourselves as mental health service providers, teachers, and supervisors. The results of staff and trainee focus groups helped us to identify learning goals for our staff and our training programs, and the Task Force was soon converted to an ongoing Multicultural and Diversity Committee (MDC). The MDC now includes both staff and trainees, and provides educational events and consultation towards improving our knowledge, awareness and skills in practicing, teaching, and supervising in an inclusive environment.

The Sexual Orientation and Gender Identity Advisory Group (SOGI) is an interdisciplinary team of providers endorsed by the MDC. SOGI aims to promote a culture of self-exploration, awareness and respect for diversity issues surrounding members of the Lesbian, Gay, Bisexual, Transgender, Intersex, or Queer (LGBTIQ) veteran community. SOGI is committed to the development and implementation of LGBTIQ-affirmative services for veterans at the VAPORHCS including the provision of appropriate training and consultation support to VAPORHCS staff and trainees.
As an equal opportunity training program, the internship welcomes and strongly encourages applications from all qualified candidates, regardless of racial, ethnic, religious, sexual orientation, disability, or other minority status.

Interns are expected to demonstrate competence in working with culturally and individually diverse clients. Didactic Seminars are a chance to improve Interns’ cultural competence as well as foster a workplace that appreciates diversity. Recent Didactic Seminars have included:

- Understanding Military Culture
- Spiritual Diversity
- Understanding Diversity in Gender & Sexual Identity
- Overcoming Unconscious Bias in Clinical Practice
- Latino Psychology

Each Intern also presents one Seminar during the year on a self-directed topic concerning diversity or ethical/legal issues.

On an institutional level, VAPORHCS promotes diversity recruitment and retention through an active Equal Employment Opportunity (EEO) Program with an Advisory Committee as well as a Multicultural Diversity Network.

Special Emphasis Program Representatives (SEPRs) champion diversity concerns of particular groups including Veterans, ethnic/ racial/ cultural groups, women, LGBTIQ people, and people with disabilities. VAPORHCS was the first VA site to establish an LGBTIQ SEPR position on its EEO Advisory Committee. The Multicultural Diversity Network holds varying special-emphasis programming for Veterans and staff to highlight the presence of diversity in the facility and help others gain a more complete understanding of those who may be different from themselves: past examples include Asian-Pacific Islander Day, which features food and music from the diverse Asian and Pacific Islander cultures of VAPORHCS employees; LGBTIQ movie presentations for LGBTIQ Pride Month; and the Martin Luther King Day celebration.

**Intern Classes’ Demographics:** From 2002 to 2015, among 66 Interns, 42 (64%) were women and 24 (36%) were men; 58 (88%) identified as Caucasian, 3 (5%) as Asian/Pacific Islander, 1 (2%) as Black/African American, and 2 (3%) as Hispanic/Latino; 6 (9%) identified as LGBTIQ; and 1 (2%) identified as subject to the Americans with Disability Act. In our 2014-15 internship class, among 6 Interns, 1 identified as a Veteran (17%); and 1 (2%) spoke fluently in another language in addition to English (Spanish).

**Staff Demographics:** Of 49 psychologists in 2015, 31 (63%) are women and 18 (37%) are men; 44 (90%) identify as Caucasian, 1 (2%) as American Indian/Alaskan Native, 3 (6%) as Asian/Pacific Islander, 1 (2%) as Black/African American, and 6 (12%) as Hispanic/Latino; 5 (10%) identify as LGBTIQ; 3 (6%) identify as subject to the Americans with Disability Act; 1 (2%) is active duty in the military, and 6 (12%) are Veterans; and 7 (14%) speak fluently in other languages in addition to English (1 speaks Afrikaans, 1 Burmese, 1 French, 1 German, and 3 Spanish).
Intern Life

Interns typically work a 40-hour week, Monday through Friday, from 8 a.m. to 4:30 p.m. Modifications may be made on occasion, depending on rotation-specific duties. Interns may request four hours each week to work on their dissertations or research projects.

The intern class shares two offices furnished with desks, computers, and telephones for each intern. Sharing space provides consultation opportunities with colleagues and builds camaraderie within the intern class. Past intern classes have reported that they prefer this arrangement to individual, isolating offices. The intern offices are adjacent to a shared postdoctoral resident office and the Mental Health Program Assistant’s office.

At the end of each weekly didactic seminar and group supervision, interns are given one hour during which they are encouraged to socialize with one another, discuss issues related to their individual rotations, and offer support to each other. Interns are encouraged to enjoy this time away from the VA and build class cohesion. Past intern classes have explored Portland’s excellent array of restaurants for this mandatory meeting, while others choose to relax on the waterfront or at a local park.

Training Rotation Descriptions

Health Promotion and Recovery

Supervisors: Dr. Hightower and Inpatient Psychiatry Psychologist. This rotation emphasizes interdisciplinary consultation and collaboration in the context of both outpatient primary care and inpatient psychiatry settings.

Outpatient Primary Care Clinics. Under the supervision of Dr. Hightower, Health Behavior Coordinator for VAPORHCS, the intern will spend approximately two to three days focused on health promotion activities with a variety of primary care clinics throughout VAPORHCS. The Health Behavior Coordinator, as part of the Health Promotion Disease Prevention (HPDP) Program contributes to a system-wide effort to improve wellness by targeting health behaviors and chronic health conditions. The role of Psychology within this program involves working with primary care and other facility staff, Veterans, and Healthcare system leaders to provide services to Veterans that better support wellness. Therefore, in addition to promoting wellness and personalized care to the Veteran in individual and group contexts, the intern working with the Health Behavior Coordinator will have a strong grasp on how to utilize and teach Motivational Interviewing-consistent communication. The intern also has the opportunity to engage in program development, and sit on hospital committees such as the Health Promotion Disease Prevention Committee and the Tobacco Cessation Workgroup.

Inpatient Psychiatry. Under the supervision of the Inpatient Psychiatry Psychologist, the intern will spend approximately two to three days focused on consultation, psychological assessment, individual and group interventions for Veterans with acute psychosis, risk for self-harm, neurocognitive disorders, and other acute psychiatric conditions within the Inpatient Psychiatric Unit. Within the inpatient psychiatry unit, interns function as part of interdisciplinary teams that promote stabilization, recovery and wellness for Veterans on the unit. Interns attend interdisciplinary unit meetings such as Morning Report and Treatment Team Meetings, and they participate in team and family meetings with the Veteran and co-lead inpatient groups, as assigned. A focus of this experience is learning to assess and treat Veterans from a Recovery perspective and developing a deeper understanding of the Recovery approach to working with people with acute and serious mental illness.

Health Psychology and Integrated Care

Supervisors: Drs. Fuller and Mallon. The Health Psychology rotation is an interdisciplinary experience designed to prepare interns for new and evolving roles as psychologists in medical settings. Interns learn consultation, assessment, and treatment skills in a variety of settings, including the General Medicine Psychiatry Clinic and the Hepatitis C Resource Center (HCRC). Interns have a unique opportunity to work directly with medical care providers to assess patients during physician visits and to provide psychological counseling and education to patients with medical concerns. Interns will also provide brief psychotherapy and supportive counseling to those Veterans in need of more in-depth services.

The General Medicine-Psychiatry Clinic (GM-Psych) is a consultation and treatment service that serves patients and primary care providers in the VA's Primary Care Clinic. Its mission is to provide evaluation, and when indicated, short-term treatment for medical patients who have concurrent mental health issues, which frequently are related to their medical problems. For example, patients may be struggling to implement lifestyle changes to ameliorate their medical conditions, or may be facing a new, serious medical diagnosis. The challenge is to function as a generalist mental health provider, and prioritize intervention
strategies with patients who typically have several interrelated problems. Meeting the needs of the medical provider who refers the patient is as important as meeting the needs of the patient. The intern will also gain experience with evaluation of Veterans participating in the Post-Deployment Clinic. Typically, about half the intern's time is devoted to evaluations, and half to treatment. Intern goals for the training experience are solicited in order to help determine the specific cases assigned. This training is located in one of our Community Based Outpatient Clinics and requires driving. Dr. Mallon is the Clinical Supervisor for this component of the rotation.

The Hepatitis C Clinical Case Conference facilitates integrated care of Veterans with hepatitis C, and interns serve as members of a multidisciplinary care team. Interns conduct evaluations for patients being considered for interferon and ribavirin combination therapy (IFN/RBV). Interns may also work with these patients to help them prepare for IFN/RBV and to help them manage neuropsychiatric side effects throughout the course of treatment. Typically patients will be triple-diagnosed with medical, mental health, and substance abuse diagnoses. Additionally, interns may work with several other behavioral medicine cases not involving hepatitis C; typical issues include chronic pain, psychosomatic disorders, and mental disorders secondary to a medical condition. Dr. Fuller is the Clinical Supervisor.

Mental Health Clinic

Supervisors: Drs. Burnett, Goy and Ortola. The Mental Health Clinic is located adjacent to the main hospital in Portland with a branch at the Vancouver division. The clinic staff members are multidisciplinary and include psychiatrists, psychologists, nurses, social workers, counselors, and recreation therapists. Providing training is a priority for all clinic staff, and interns are encouraged to consult with providers from other disciplines. Interns join a multidisciplinary treatment team and meet with the team to staff intake assessments and complex cases. Interns are encouraged to focus on professional development as well as on clinical training. Supervision is intended to maximize individuation of the intern as a developing professional, and is tailored to individual strengths and needs. Listed below are some of the experiences available on this rotation.

General Outpatient Mental Health. Interns have the opportunity to gain exposure to the full spectrum of mental health diagnoses. Breadth of training is encouraged by offering interns exposure to new demographic groups, diagnostic groups, and treatment approaches, which develop general mental health clinician competencies (e.g. intake assessments, diagnostic assessments, group and individual therapy). Drs. Goy and Ortola provide supervision for general outpatient mental health cases, while Dr. Burnett provides supervision for Couples/Family therapy. Depth of training is encouraged by supporting interns in developing more expertise in their particular interest areas through an optional minor rotation focus. Minor rotation focus activities may include Couples/Family Therapy, Dialectical Behavior Therapy, Geropsychology/Palliative Care Psychology, or Telemental Health.

Group Therapy. The MHC offers a variety of ongoing and recurrent groups, many of which are empirically supported treatments. Some of these include Managing Your Moods, (psychoeducational group incorporating cognitive, behavioral, and mindfulness interventions), Mindfulness-Based Cognitive Therapy for Depression, ACT For Your Life, Anger Management, Stress Management, Dialectical Behavior Therapy, WWII/Korean Veterans (process) and Loss (process) groups. Interns co-facilitate, on average, four psychoeducational and/or process groups during this rotation. Dr. Ortola supervises the group therapy component of the rotation.
Assessment Clinic. Interns work approximately one half day each week in the Psychology Assessment Clinic. Mental Health Clinic interns respond to assessment requests from mental health providers and conduct cognitive, personality, and diagnostic evaluations to answer referral questions.

Neuropsychology
Supervisors: Drs. Ensley, Huckans, Nelson, O’Neil, Storzbach, and Tun. Neuropsychology serves the entire state of Oregon and much of southern Washington. While many referrals come from Neurology, patients are seen from all services and have a wide variety of neurological diseases or suspected brain dysfunction. Neuropsychology provides assessment of patients with possible brain dysfunction for diagnostic and treatment purposes, individual and group counseling to patients and their families, and consultation on patient management. The training experience is designed to enhance the specialized skills of interns with prior neuropsychology experience and to allow novices the opportunity to learn basic skills while providing useful clinical service. The assessment approach combines structured and flexible techniques. Interns also have the opportunity to work in OHSU neuropsychology clinics with adults and sometimes children. Although assessment remains the primary clinical activity of the Neuropsychology Clinic, in recent years there has been increasing emphasis on providing neuropsychological rehabilitation services as well. Interns attend seminars that provide theoretical and practical reviews of current issues including Neuropsychology Case Conferences and Neuropsychology Journal Club Meetings. Interns will generally complete 20 to 25 neuropsychological assessments while on this rotation.

Posttraumatic Stress Disorder (PTSD)
Supervisors: Drs. Grodin, Plagge, Powch, Súñiga, and Wagner. Interns on this rotation work as integral members of the PTSD Clinical Team. This multidisciplinary team responds to requests for assessment and treatment of PTSD throughout the Medical Center. In addition to combat trauma, Veterans may present with military sexual trauma and other types of trauma that occur in the line of duty. Co-diagnoses and associated issues commonly occurring in these populations include childhood trauma, substance abuse, mood disorders, personality disorders, and traumatic brain injury. Training emphasizes conceptualization and treatment of acute and chronic posttraumatic sequelae, largely from a cognitive-behavioral perspective. Supervision is conducted in individual and group formats and incorporates interns’ individual training goals and attention to the impact of working with traumatized populations. This rotation takes place on the Vancouver and Portland campuses and will require the intern to travel between both locations. Listed below are some of the experiences available on this rotation.

Individual, Couples, and Family Therapy. Interns maintain a caseload of individual clients with opportunities for couples and family therapy as treatment-relevant and consistent with interns’ training objectives. While more male Veterans are seen in our outpatient clinic than female, opportunities exist for working with female Veterans and will be incorporated into interns’ training as much as possible. The primary therapeutic orientation of supervisors is cognitive-behavioral though additional orientations and treatments may be incorporated according to the supervisor and case. The PTSD Clinical Team adheres to empirically supported approaches to treatment. Interns will have opportunities for training in Prolonged Exposure treatment, Cognitive Processing Therapy, and skills-based training for management of PTSD symptoms. Additional treatments, such as Behavioral Activation and Acceptance and Commitment Therapy may be incorporated as relevant.
Group Therapy. The PTSD Clinical Team offers a range of group treatment options for Veterans, including PTSD Symptom Management (a skills-based, psychoeducational group, separate groups offered for women Veterans), Cognitive Processing Therapy, Mindfulness Based Cognitive Therapy (for PTSD), Women’s Sexual Trauma Survivor Group (based on CPT), PTSD Growth Group (manualized motivation enhancement and social re-integration group), Family Education Group (psychoeducational group), and PTSD Graduates and Support Groups (process groups). Interns co-facilitate, on average, four groups during this rotation.

PTSD-Focused Assessments. Interns obtain training in standard PTSD diagnostic and screening assessment instruments including the Clinician Administered Structured Interview for PTSD (CAPS) and the Posttraumatic Stress Disorder Checklist (PCL). Opportunities also exist for integrating PTSD and personality assessments, according to supervisor and client need.

Rural Telemental Health

Supervisors:  Drs. Campbell, Campoverde, Chisholm, Hutson & Woodside. The Rural Telemental Health (RTH) rotation offers distinct, innovative training opportunities. Our novel service delivery methods complement interns’ psychotherapy, psychological evaluation and consultation training.

The rotation offers an opportunity to provide care to traditionally underserved rural veterans throughout the Pacific Northwest (Oregon, Washington & Idaho). This veteran population is often isolated in communities with limited social, medical and psychotherapeutic resources. The rotation offers training for future psychologists who may elect to live and work in rural communities by familiarizing providers with the challenges presented by rural settings (e.g., dual relationships, community involvement, working alliances with local providers). Prospective interns can expect a diverse panel of patients with varied diagnoses and behavior disorders. Assessment and consultation activities will round out individual, couples and group therapies.

Interns can expect training in the emerging and rapidly expanding field of telemental health services. Both VA and non-VA systems are adopting these service technologies/methods and there is a need nationally to fill these positions with trained and experienced professionals.
This training will assist interns in establishing competencies that will become ever more in demand as these services proliferate. Interns can expect to receive education about the issues and techniques associated with tele-service delivery. These include: ethical issues (e.g., privacy), relationship building via teleconferencing, accessing local services, technological challenges, therapeutic effectiveness, and service limitations and advantages. Interns will also participate in both live/direct (required by APA) and pioneering work in virtual supervision.

This rotation is funded specifically to employ an interprofessional training model. As such, psychology interns will interact regularly and participate in some joint training activities with social work and chaplain interns and with psychiatry residents. These experiences will serve to better familiarize interns with complementary professional services, roles and conceptual approaches to mental health care broadly.

Our team promotes scholarly work and research contributions related to this specialty care.

**Substance Abuse Treatment Program**

**Supervisors: Drs. Anderson, Johnson, Rodriguez, Sardo, and Súñiga.** Substance Abuse Treatment Program (SATP) interns participate in providing intake screenings, biopsychosocial assessments, individual and group education sessions, and treatment and consultation services while serving as clinicians-in-training with the SATP multidisciplinary teams. The primary site for this rotation is at the Vancouver, Washington, campus of VAPORHCS. Intern activities may include specialty training and/or education opportunities in the medical center and community venues, including Veterans’ homes and non-VA service centers. Interns may also obtain experience in assisting with SATP program development and in providing substance use disorder consultations to VAMC providers. These consultations occur in the Medical Center’s Primary Health Care and Specialty Care Clinics and Programs (e.g., Liver Transplant Program) as well as in VA community-based clinics and counseling programs (e.g., Portland and Salem Veterans Centers and Salem Mental Health and Primary Care Clinic). This is an excellent rotation for interns interested in developing their qualifications for certification by the American Psychological Association's College of Professional Psychology in the Treatment of Alcohol and Other Psychoactive Substance Use Disorders.
Clinical Psychology Postdoctoral Fellowship Programs

The VA Portland Health Care System is pleased to announce four emphasis areas for our psychology postdoctoral fellowship (residency) programs at our facility for the 2016-2017 academic year:

- Health Psychology
- Mental Health/Primary Care Integration
- Palliative Care
- Polytrauma

Fellowships are for 2080 hours to be completed over a 12-month period. The 2016-2017 fellowship training year will begin on September 5 (Labor Day holiday), 2016.

We follow a Scientist-Practitioner model of training. Fellows will participate in a specially designed didactic seminar series each week. The series will draw from resources at the VA, at OHSU, and in the community. Didactics will include postdoc-specific professional development and didactic seminars twice monthly; for weeks without these postdoc-specific seminars, fellows construct an individualized, specialty-specific didactics program from the many other professional training opportunities available, such as Psychiatry Grand Rounds. Fellows will receive two hours of individual supervision weekly and one hour of group supervision with other psychology postdoctoral trainees. Fellows will also be trained in supervision and obtain experience in supervised supervision of psychology practicum students. All fellows meet weekly for one hour of informal peer process group during which they support one another and compare experiences. Fellows spend on average 27 hours per week engaged in service delivery, which includes assessment, intervention, consultation, provision of supervised supervision, and participation in treatment team meetings and other institutional committees. Most clinical and research activities will take place at the VA Portland Health Care System and its community outpatient clinics, but fellows may also spend time at Oregon Health & Science University, our medical school affiliate.

Our training goals and related objectives:

<table>
<thead>
<tr>
<th>Training Goals</th>
<th>Objectives</th>
</tr>
</thead>
</table>
| Goal # 1: Postdoctoral trainees will be able to function independently as competent professional psychologists delivering clinical services | Objective 1A) Trainees are competent in psychological assessment and diagnosis  
1B) Trainees are competent in a wide array of evidence-based, effective psychotherapeutic interventions |
| Goal #2: Postdoctoral trainees will demonstrate advanced skills in collaborating with diverse professions | Objective 2A) Trainees are competent functioning as members of treatment teams composed of diverse professionals  
Objective 2B) Trainees provide effective psychological consultation in various settings  
Objective 2C) Trainees evaluate their own performance and that of others  
Objective 2D) Trainees are competent in supervising others and offering constructive feedback |
| Goal #3: Postdoctoral trainees will integrate scientific methods with clinical practice | Objective 3A) Trainees are familiar with the scientific literature and evidence base of their clinical practices  
**Objective 3B)** Trainees apply methods of scientific inquiry in evaluating their clinical practices  
**Objective 3C)** Trainees favor clinical methods supported by empirical evidence |
|---|---|
| Goal #4: Postdoctoral trainees will demonstrate professional identity and behavior | Objective 4A) Trainees are knowledgeable of ethical, legal, and professional standards of behavior while integrating them into professional conduct  
**Objective 4B)** Trainees articulate and pursue individualized career goals and plans  
**Objective 4C)** Trainees evaluate their own experience and behavior, identify training needs/gaps or dilemma, and pursue their remediation or resolution |
| Goal #5: Postdoctoral trainees will demonstrate sensitivity to diversity across cultures and individuals | Objective 5A) Trainees are experienced in working with a diversity of clients and professionals  
**Objective 5B)** Trainees can assess their competence when working with a particular culture or individual and access methods of improving that competence  
**Objective 5C)** Trainees can articulate their own cultural identities and influences, assess those of others, and understand how these might interact |
| Goal #6: Postdoctoral trainees develop depth of clinical experience in an area of emphasis in Psychology practice | Objective 6a) Trainees are acquiring specific competencies in their area of training emphasis |

The stipend for these positions is currently $44,530 plus benefits (a portion of each paycheck is applied to health care benefit premium). Residents are granted Annual Leave and Sick Leave, ten federal holidays, and, pending approval at the discretion of the Medical Center Director, up to six days of authorized absence for educational leave.

To learn more about our fellowships or to apply, please see our Clinical Psychology Fellowships brochure.
Other Training Experiences

VAPORHCS and OHSU offer varied didactic opportunities. The Psychology Intern Seminar Series is presented weekly and attendance is required. Attendance at additional seminars, grand rounds, and other presentations is encouraged.

One afternoon a week is devoted to internship training activities that include a 90-minute didactic seminar, an hour of group supervision, and an hour of intern professional development and mutual support time. The afternoon focuses on development of both clinical competency and professional identity. Didactic seminars cover a variety of topics, examples of which are listed in the next section. Staff psychologists conduct the weekly group supervision, and once a month the group supervision is assessment focused.

Intern time is an informal meeting during which the interns support one another and discuss relevant training and professional development issues. At the end of the first two rotations, interns are allotted four hours for an intern retreat to share information about experiences on the respective rotations and talk about growth during the training experience. Interns are given a full day for a retreat at the end of the third rotation to process their experiences. These retreats have proven to be valuable components of internship training and professional development.

Didactic Seminars

VAPORHCS staff and interns, OHSU faculty, and psychologists from the community present on such topics as:

- Military Culture
- Unconscious Bias and Other Multicultural and Diversity Related Issues
- Spiritual Diversity
- Understanding Diversity in Gender & Sexual Identity
- Ethical Decision Making
- Supervision Skills
- Suicide Risk Assessment
- Violence Risk Assessment and Threat Management
- Military Sexual Trauma
- PTSD Assessment
- Evidence Based Treatments for PTSD, Substance Use Disorders and Other Diagnoses
- Neuropsychology (2-part series)
- Tele-Mental Health
- Professional and Career Development
- Interprofessional Collaboration
- Self-care and Burnout
In addition to these weekly seminars, a wide range of educational opportunities are available at VAPORHCS and OHSU that include the following: Geriatric Research Education and Clinical Center (GRECC) video conference seminars; Mental Illness Research, Education, and Clinical Center (MIRECC) video conference seminars; Geropsychiatry journal club discussions; Neuropsychology Case Conference and Journal Club Meetings led by Dr. Daniel Storzbach; Neuropsychology Case Conference led by Dr. Diane Howieson; and OHSU Psychiatry Grand Rounds. The internship encourages the development of a lifelong pattern of continuing education through reading and attending lectures, seminars, and conferences.

**Required Training Experiences for Interns and Fellows**

Regardless of which three rotations constitute an individual's course of internship training at VAPORHCS, all psychology interns will gain experience in assessment, treatment, and consultation across the rotations throughout the internship year.

**Assessment**

Interns obtain assessment experience on all rotations. Interns will conduct intake assessments and learn to make competent DSM5 diagnoses. Interns also use a number of personality and cognitive assessment instruments, including the MMPI-2, PAI, WMS-IV, WAIS-and IV. Interns will learn to clarify referral questions, select test batteries, administer and score tests, integrate test results with other data, write clear and concise reports, and provide feedback to patients and referring providers.

**Treatment**

VAPORHCS uses a number of psychological treatment approaches. Interns will provide individual therapy that is generally time-limited. Presenting problems include anxiety, depression, personality disorders, and major mental illness. Family therapy also can be an important component of treatment and may be used as an adjunctive or primary mode of therapeutic intervention. Treatment is provided in conjunction with the ongoing assessment of outcome. Additionally, interns will provide group therapy for a variety of Veterans. Interns acquire skills in developing, planning, and leading psychoeducational and process groups. The VAPORHCS joins VAs nationally in providing evidence-supported therapies when appropriate. Some years interns have been offered the opportunity for certification in a specific evidence based psychotherapy, such as cognitive processing therapy for PTSD. However, certification opportunities are not guaranteed as they are contingent on trainer and supervisor availability, intern interest and skill level, and other institutional factors that vary year to year.

**Consultation**

Interns will learn to function as consultants during all of their rotations. In some instances, this will include representing psychology as an integral member of an interprofessional or multidisciplinary team. Helping the team make decisions about assessment, diagnosis, treatment, and discharge planning is considered an important role for interns. In other instances, the intern will serve as an independent consultant. Clarifying referral questions and providing input on diagnostic issues and treatment plans to a variety of independent practitioners, such as physicians, social workers, nurses, and chaplains are valuable skills. By the end of the internship year, the intern will have gained skills in providing consultation to multidisciplinary teams, as well as to individual practitioners from different disciplines.
Meet the Staff

Staff members are scientist-practitioners of psychology. Staff roles include delivery of clinical service, research, consultation, trainee supervision, mentorship, and administration. The majority are also OHSU faculty.

David W. Greaves, Ph.D., Chief of Psychology, Administrative Director of the Mental Health & Clinical Neuroscience Division, VAPORHCS. Clinical Associate Professor of Psychology in the Department of Psychiatry, OHSU. Dr. Greaves received his Ph.D. from Brigham Young University in 1991 and completed his internship at VAPORHCS. Over the years Dr. Greaves has worked as a clinician and program manager in multiple clinical settings at VAPORHCS, as well as being a past Director of Training. He currently provides supplemental supervision to postdoctoral fellows in the Palliative Care program. His professional interests include psychotherapy outcome studies and treatment programs for those with chronic medical illnesses.

Marilyn Huckans, Ph.D., Director of Training for Psychology, Staff Psychologist and Neuropsychologist for the Mental Health & Clinical Neuroscience Division, VAPORHCS. Associate Professor of Psychology in the Department of Psychiatry, OHSU. After receiving her doctorate in clinical psychology at George Mason University in 2004, Dr. Huckans completed postdoctoral training in health psychology research and clinical neuropsychology at VAPORHCS. Dr. Huckans currently serves as the Director of Training for Psychology at VAPORHCS and oversees the psychology practicum and internship programs. Dr. Huckans’ clinical practice currently focuses on cognitive rehabilitation for Veterans with mild cognitive impairments, as well neuropsychological assessment and consultation services.
through the Neuropsychology Clinic at VAPORHCS. Her translational research program integrates human, animal, and in vitro experiments to investigate the neuropsychiatric effects of medical, psychiatric, and substance use disorders, with a particular focus on the development and discovery of novel treatments for these conditions. Her VA and NIH funded projects have utilized neuropsychological assessment, neuroimaging, and immunological techniques to evaluate clinical outcomes in the context of traumatic brain injury (TBI), posttraumatic stress disorder (PTSD), mild cognitive impairment (MCI), depression, hepatitis C, and substance dependence, with projects primarily aimed at the development of immunotherapies for addiction and cognitive rehabilitation interventions for mild cognitive disorders. She is currently an investigator in the NIDA- funded Methamphetamine Abuse Research Center (MARC) in Portland, Oregon, and she is a developer and author of several cognitive rehabilitation treatment manuals. Her interest in serving Veterans was inspired in part because her two grandfathers served in the U.S. Navy during World War II.

Amanda Bohlig, Ph.D., Director of Postdoctoral Fellowship Training for the Psychology Service, Staff Psychologist for the Community Living Center (CLC), VAPORHCS. Dr. Bohlig received her doctorate from the University of Wisconsin-Madison after she completed her internship at VAPORHCS. She completed a postdoctoral fellowship in Palliative Care at the Portland VAPORHCS and is now a supervisor for the Palliative Care emphasis track. Dr. Bohlig strives to help Veterans in the hospice, palliative care, rehabilitation, and long-term care units improve quality of life by increasing psychological flexibility with an emphasis on values-based living. Her professional interests include end-of-life processes, couples and family issues in the context of serious illness, posttraumatic stress disorder, supervision, multicultural competence, and third-wave behavioral approaches to treatment.

Christopher F. Anderson, Ph.D., Program Co-Manager for the Substance Abuse Treatment Program (SATP) and the PTSD Clinical Team (PCT), VAPORHCS. Dr. Anderson received his doctorate from Auburn University and completed his internship at VAPORHCS in 2006, after which he joined the SATP staff. Dr. Anderson consults with the Regional Liver Transplant Program, performing pre-transplant evaluations to determine candidate's risk of relapse post transplant surgery. Dr. Anderson's current research interests include examining factors that predict patient's status on the liver transplant wait list and examining programmatic factors that increase retention in substance abuse treatment programs.

Darin Bergen, Psy.D., Staff Psychologist for General Medicine Psychiatry, VAPORHCS. Dr. Bergen received his doctorate from George Fox University after completing his internship at the Salt Lake City VAMC in 2007. He completed advanced training in medical psychology and geriatrics in the Palliative Care fellowship at VAPORHCS. He then worked as an evaluator in Compensation and Pension as well as a consultant for assisted living facilities and nursing homes before joining VAPORHCS as a staff psychologist. He currently serves as the Behavioral Health Consultant in the East primary care clinic as part of the General Medicine Psychiatry Service. He has interests in integrated primary care, delivering evidence-based psychotherapy (particularly Acceptance and Commitment Therapy) and working on interdisciplinary teams. He is the primary supervisor for the Mental Health/Primary Care Integration emphasis postdoctoral fellowship. Dr. Bergen grew up bringing his grandfather, a WWII Veteran, to VAPORHCS and has had a passion for serving Veterans ever since.

Keith A. Campbell, Ph.D., Staff Psychologist for Rural Telemental Health. Dr. Campbell received his clinical psychology doctorate from Purdue University in 1983. Dr. Campbell’s professional history includes university teaching, community mental health and hospital based clinical practice, consultation services, clinical services for adults, couples, children and
families as well as grant-funded research. His broad clinical interests are complemented by specialized focus in the treatment of psychological trauma, corporate & legal consultation services and the use of telehealth innovations for mental health treatment.

**Ines Campoverde, Ph.D., Staff Psychologist for Rural Telemental Health, Chair of the Psychology Multicultural Diversity Committee, VAPORHCS. Assistant Professor in the Department of Psychiatry, OHSU.** Dr. Campoverde received her Ph.D. in Counseling Psychology from the University of Utah, and her post-doctoral training was completed with the United States Air Force. Yes, she challenged her leadership and clinical abilities and served as a medical officer and chief psychologist for an Air Force medical center. Currently, she serves rural Veterans through individual and group modalities via video teleconferencing, and she is a rotation supervisor with the Rural Telemental Health team. Dr. Campoverde values education, is a member of the psychology training committee, and volunteers her time to clinical and group supervision with interns and post-doctoral residents. She is an integrative practitioner and uses ACT principals as her foundation. Her interests tend to reflect her social advocacy which includes the psychology of women, diversity and inclusion, cultural competency, supervision, and Telemental Health practice. When she is not serving Veterans, she spends her time laughing with her family, enjoying the outdoors, and is entranced with Jane the Virgin, RuPaul’s Drag Race, and Orphan Black.

**Matt Coopersmith, Psy.D., Staff Psychologist for the Substance Abuse Treatment Program (SATP), VAPORHCS.** Dr. Coopersmith received his doctorate in clinical psychology from The Chicago School of Professional Psychology in 2009. He completed his internship at the Psychological Services Center of Pacific University and his post-doctoral fellowship at Oregon State Hospital. He joined VAPORHCS staff in 2013 and provides clinical services within the SATP. Dr. Coopersmith provides individual and group psychotherapy, case management services, and psychological assessment. His early training was in the use of Cognitive-Behavioral therapies and he eventually discovered an interest in Dialectical Behavior Therapy (DBT). He was intensively trained in DBT and currently facilitates a DBT skills group within the SATP.

**Megan Ensley, Psy.D., Clinical Neuropsychologist and Research Psychologist for the Neuropsychology Service, VAPORHCS.** Dr. Ensley received her Psy.D. in Clinical Psychology from The American School of Professional Psychology at Argosy University in Washington D.C. in 2012. She completed her internship and a two-year polytrauma postdoctoral fellowship at the VAPORHCS. Her clinical interests include neuropsychological assessment and cognitive rehabilitation, particularly for Veterans with comorbid mTBI and PTSD. Dr. Ensley’s research collaborations involve studying the psychological and cognitive effects of brain trauma, cognitive rehabilitation for Veterans with comorbid mTBI and PTSD, alternative treatment and rehabilitation methods for trauma (i.e., yoga for PTSD), and interventions for healthy brain function and improved quality of life. She is currently the study coordinator and a co-investigator for a VA-funded study, a multisite investigation of group cognitive rehabilitation outcome.

**Bret Fuller, Ph.D., Staff Psychologist for the Mental Health Clinic, VAPORHCS. Assistant Professor in the Department of Public Health & Preventative Medicine, OHSU.** Dr. Fuller attained his doctorate from the University of Missouri-Columbia in Counseling Psychology and completed a three-year postdoctoral fellowship in addiction studies at the University of Michigan. He spent six years at Oregon Health and Science University where he published in the areas of substance abuse treatment, methadone policy, and smoking cessation. Currently, he is a member of the Northwest Hepatitis C Resource Center.

**Jed P. Grodin, Ph.D., Staff Psychologist for the PTSD Clinical Team, VAPORHCS.** Dr. Grodin received his doctorate from the University of Southern California, where he conducted
research on motivational interviewing and behavior change in psychotherapy. He completed his internship at the Long Beach VAMC and then completed a fellowship in Behavioral Medicine at Harbor-UCLA. Before joining the PTSD Clinical Team at VAPORHCS, he served as the Behavioral Medicine consultant to the Department of Family Medicine at Harbor-UCLA Medical Center.

Elizabeth Goy, Ph.D., Staff Psychologist for the Mental Health Clinic, VAPORHCS. Associate Professor of Psychology in the Department of Psychiatry, OHSU. Dr. Goy completed a VA Health Services Research & Development Career Development Award in 2011 and is affiliated with the VAPORHCS Portland Center for the Study of Chronic, Comorbid Mental and Physical Disorders. Dr. Goy was previously the Director of Training for the Psychology Service at VAPORHCS and continues as a member of the Psychology Training Committee. She is the lead supervisor of the VA Postdoctoral Fellowship in Palliative Care Psychology. Her clinical practice is focused on mental health interventions for patients with chronic or life-limiting illness. Her research interests include psychiatric and psychological aspects of end-of-life care, with an emphasis on neurological disorders. Her research includes: investigating correlates of psychogenic seizures, documenting the prevalence of mental disorders in hospice patients at the end of life; treatment strategies for depression in hospice and palliative care patients; identification of early predictors of dementia in Parkinson’s Disease; family and patient experiences with and views on dying in Oregon; and documenting the end-of-life trajectory for patients with Parkinson’s Disease.

Jennifer Hightower, Ph.D., Clinical Psychologist and Health Behavior Coordinator for the Primary Care Division, VAPORHCS. Affiliate Faculty to the School of Nursing, OHSU. Dr. Hightower received her Ph.D. in Clinical Psychology from the California School of Professional Psychology in Fresno, California, in 2009. She completed her clinical psychology internship and post-doctoral residency at the Alaska VA Healthcare System in 2008/2011. While working with Veterans in Alaska, Dr. Hightower discovered that her core values align with the values of the Veterans that she serves. In 2011, she joined VAPORHC’s Primary Care Division to provide training and support to the primary care Patient Aligned Care Teams’ delivery of patient-centered, personalized, proactive health care to Veterans. Dr. Hightower is VAPORHCS’ trainer for Motivational Interviewing applied in the medical setting. She provides consultation to OHSU nursing faculty, primary care leaders, and facility staff on developing patient-centered care practices with the emphasis on health promotion and disease prevention. Her professional interests include promoting wellness in both Veterans and staff, primary care-mental health integration, and Acceptance and Commitment Therapy.

Daniela Hugelshofer, Ph.D., PCL Manager of the Vancouver Mental Health Clinic (V-MHC), VAPORHCS. Assistant Professor of Psychology in the Department of Psychiatry, OHSU. Dr. Hugelshofer received her doctorate in clinical psychology from Washington State University in 2006 after completing her pre-doctoral internship at the VAPORHCS. She completed a postdoctoral fellowship specializing in general mental health, PTSD, and substance abuse treatment at the Kansas City VA in 2007 and was pleased to re-join the Portland VA psychology staff thereafter. She is currently serving as PCL Manager of the Vancouver MHC. Dr. Hugelshofer’s clinical work has most recently focused on the assessment and treatment of military-related PTSD. She has clinical expertise in cognitive-behavioral therapy, with particular emphasis on the delivery of evidence-based treatments for PTSD, such as Prolonged Exposure (PE) and Cognitive Processing Therapy (CPT).

Wendy Johnson, Ph.D., Staff Psychologist for the Substance Abuse Treatment Program (SATP), VAPORHCS. Dr. Johnson received her doctorate from University of New Mexico after completing her predoctoral internship at VAPORHCS in 2007. She joined the SATP
staff in 2008 and is a psychologist on the complex addictions team. Her interests are in evaluation and dissemination of evidence based therapies for substance use disorders. She is especially interested in motivational interviewing and has been a member of the Motivational Interviewing Network of Trainers (MINT) since 2003. She is a trainer and consultant with the VA National Training Initiatives for Motivational Interviewing and Motivational Enhancement Therapy. Dr. Johnson also consults with the Regional Liver Transplant Program, performing pre-transplant evaluations to assess Veteran’s risk of relapse following transplant surgery.

**Travis Lovejoy, Ph.D., M.P.H., Staff Psychologist for the Substance Abuse Treatment Program (SATP), VAPORHCS. Assistant Professor of Psychology in the Department of Psychiatry, OHSU.** Dr. Lovejoy received his doctorate in clinical psychology from Ohio University in 2011 and completed his internship and health psychology post-doctoral fellowship at VAPORHCS. He joined VAPORHCS staff in 2012, and provides clinical services within SATP. Dr. Lovejoy has an active line of research that focuses on the treatment of chronic pain in patients with substance use disorders. Other research interests include the use of motivational and behavioral interventions to reduce HIV transmission risk behaviors in HIV-seropositive persons. Dr. Lovejoy is actively involved in health psychology and behavioral medicine professional associations and currently serves as Chair of the Early Career Professionals Council for Division 38 (Health Psychology) of the American Psychological Association.

**Kevin F. Mallon, Ph.D., Staff Psychologist for General Medicine Psychiatry, VAPORHCS. Assistant Professor of Psychology in the Department of Psychiatry, OHSU.** Dr. Mallon received his doctorate in clinical psychology from the University of Nebraska–Lincoln in 1992, completing his internship at the Martinez (California) VA Medical Center (now part of the VA Northern California Health Care System), as well as pre- and post-doctoral training in clinical neuropsychology. He worked as a senior psychometrist at the University of California, San Francisco, and as a neuropsychologist at a rehabilitation hospital, before returning to the VA Northern California HCS in 1995, where he worked in primary care mental health, behavioral medicine (with a focus on pain management), and supervision of neuropsychology trainees. In 2007, he came to VAPORHCS to work in the primary care setting. His interests include psychological and neuropsychological assessment, behavioral medicine, brief therapies, EMDR, and the application of positive psychology interventions to clinical problems.

**Katie McCall, Ph.D., Staff Psychologist for the Residential Rehabilitation Treatment Program (RRTP) and General Medicine Psychiatry, VAPORHCS.** Dr. McCall received her doctorate in Clinical Psychology from the University of Texas in 2008. She completed her internship at VAPORHCS and remained to complete a 2 year polytrauma postdoctoral fellowship working within the Neuropsychology and PTSD clinics. Dr. McCall became a staff psychologist in 2011 working within VAPORHCS’s new RRTP program and in GM psychiatry. Her clinical work involves program development and is focused on providing assessment, treatment, and case management for Veterans within both the residential and outpatient care settings. Additionally, Dr. McCall serves as the Local Evidence Based Psychotherapy Coordinator for VAPORHCS. Her professional interests include neuropsychological assessment, treatment of PTSD, and the application of acceptance and mindfulness based interventions to clinical problems.

**Benjamin Morasco, Ph.D., Staff Psychologist, VAPORHCS. Associate Professor of Psychology in the Department of Psychiatry, OHSU.** Dr. Morasco received his doctorate in clinical psychology from Saint Louis University in 2003. He completed a postdoctoral fellowship in clinical health psychology at Harford Hospital and a research fellowship in addictive behaviors at the University of Connecticut Health Center. He joined VAPORHCS in
2005 and provides clinical services in the Substance Abuse Treatment Program. He receives grant funding from NIH, VA, and the U.S. Food & Drug Administration to examine issues related to improving the safety and effectiveness of chronic pain treatments, with a focus on patients with comorbid substance use disorders.

Adam Nelson, Ph.D., ABPP-CN, Clinical Neuropsychologist for the Neuropsychology Service, VAPORHCS. Assistant Professor of Psychology in the Department of Psychiatry, OHSU. Dr. Nelson received his Ph.D. in Clinical Psychology from the California School of Professional Psychology in Fresno, California in 2005. He completed his clinical psychology internship at the VAPORHCS in 2004/2005 and then a two-year post-doctoral Neuropsychology residency at the VA Northern California Health Care System. Dr. Nelson completed board certification (ABPP) in Clinical Neuropsychology in March 2015. Currently, he is a staff member of the Neuropsychology Service at the VAPORHCS, focusing the majority of his time on assessments of adults with neurocognitive disorders and supervision of Neuropsychology trainees. Dr. Nelson has particularly strong clinical and research interests in geriatric neuropsychology.

Maya O’Neil, Ph.D., Neuropsychologist for the Neuropsychology Service, VAPORHCS. Assistant Professor of Psychology in the Departments of Psychiatry and Medical Informatics and Clinical Epidemiology, OHSU. Dr. O’Neil received her doctorate from the University of Oregon and completed her internship at VAPORHCS. She is an AHRQ-funded PCOR K Scholar at OHSU. She provides supervision related to assessment and neuropsychological research and clinical work and conducts neuropsychological assessments, cognitive rehabilitation, and PTSD treatment. Her clinical interests include neuropsychological assessment and treatment of comorbid PTSD and TBI. Her research interests focus on statistics and systematic review methodologies, cultural competence assessment and training, and the psychological and cognitive effects of trauma, blast exposure, and TBI.

Gina L. Ortola, Ph.D., Staff Psychologist for the Mental Health Clinic, VAPORHCS. Assistant Professor of Psychology in the Department of Psychiatry, OHSU. Dr. Ortola received her doctorate from Washington State University in 1996 and completed a postdoctoral fellowship in geropsychology at VAPORHCS. She enjoys incorporating mindfulness-based interventions into her work and has a personal mindfulness practice as well. She has been a member of a Dialectical Behavior Therapy Team for several years and is currently Co-Coordinator for the team. When not working as a psychologist, she enjoys cooking, watching the food network, and being outdoors when it’s not raining.

Douglas J. Park, Ph.D., Staff Psychologist and Local Recovery Coordinator, VAPORHCS. Dr. Park received his Ph.D. in Clinical Psychology from the University of Missouri-St. Louis in 1990. Dr. Park worked for almost 20 years in community mental health, with a particular emphasis on time-limited psychotherapy and crisis services. He joined VAPORHCS in 2007. As Recovery Coordinator, Dr. Park works to promote a client-centered approach to care that emphasizes strengths, client empowerment, and living a meaningful life. While utilizing a variety of theoretical paradigms, he particularly attempts to incorporate ACT in his clinical work. Dr. Park is himself a Veteran, having served aboard two ships in the U.S. Navy from 1973-1976.

Jane Plagge, Psy.D., Staff Psychologist, PTSD and Pain, VAPORHCS. Dr. Plagge earned her doctorate in Clinical Psychology with an emphasis in Health Psychology from Pacific University in 2009. She completed a Medical Psychology track internship at the VA North Texas Health Care System in Dallas, TX. Her postdoctoral fellowship was in Health Psychology at VAPORHCS. Subsequently, she joined VAPORHCS as a staff psychologist specializing in the
treatment of comorbid chronic pain and PTSD. Her professional interests include health psychology, chronic pain, PTSD, CBT, and program development.

**Irene G. Powch, Ph.D., Staff Psychologist for the PTSD Clinical Team, VAPORHCS. Assistant Professor of Psychology in the Department of Psychiatry at OHSU.** Dr. Powch completed her internship at the Seattle VA and received her doctorate from the University of Kansas in 1995. She completed a postdoctoral fellowship at the Pacific Center for PTSD/VA National Center for PTSD in Honolulu in 1996. She has advanced evidence-based treatments for PTSD related to combat and military sexual trauma. She was a site investigator for the VA Cooperative Study that brought recognition within VA to Prolonged Exposure Therapy and was trained in this therapy by Edna Foa in 2001. She is a certified PE and CPT therapist, and when indicated, integrates object relational/attachment, emotion-focused/gestalt, and feminist/social learning approaches into her work. She is on the forefront of exploring complementary approaches to PTSD treatment. Her research interests include acupuncture as an adjunct to cognitive processing therapy for PTSD.

**Veronica Rodriguez, Ph.D., Staff Psychologist for the Substance Abuse Treatment Program, VAPORHCS.** Dr. Rodriguez received her doctorate from Arizona State University in 2008 after she completed her predoctoral internship through the Southwest Consortium Predoctoral Psychology Internship (SCPPI) in Albuquerque, New Mexico. She completed her postdoctoral training in Health Psychology at the VAPORHCS. In 2009, she joined the Substance Abuse Treatment Program where she provides substance/mental health treatment among older adults. Her clinical work focuses on Veterans with comorbid health/medical problems, substance related concerns, and psychiatric disorders. Her clinical interests include motivational interviewing, mindfulness-based interventions, and intersection between chronic pain and substance use disorders. She also consults with the VAPORHCS Liver Transplant Program, performing substance abuse focused assessments.

**James M. Sardo, Ph.D., Program Co-Manager for the Substance Abuse Treatment Program (SATP) and the PTSD Clinical Team (PCT), VAPORHCS. Assistant Professor of Psychology in the Department of Psychiatry, OHSU.** Dr. Sardo received his doctorate from SUNY Binghamton in 1998 and completed advanced training in PTSD at VAPORHCS in 1999. As the Co-Manager of the SATP and PCT, he performs administrative duties and provides individual and group services for the treatment of substance abuse. Dr. Sardo consults with the Regional Liver Transplant Team. His research interests include both the etiology and treatment of Alcohol Dependence and the efficacy of skill-based management of PTSD. Dr. Sardo serves in the United States Air Force Reserve and has completed three deployments to Iraq, where he provided a range of mental health services while attached to 332nd EMDG.

**Daniel Storzbach, Ph.D., Head of the Neuropsychology Service and Research Psychologist, VAPORHCS. Associate Professor of Psychiatry and Neurology, OHSU.** Dr. Storzbach received his doctorate in clinical psychology from the University of Nebraska-Lincoln in 1995 and completed his postdoctoral training in neuropsychology at VAPORHCS. He is the head of VAPORHCS’s Neuropsychology Clinic and the primary supervisor for neuropsychology training. Dr. Storzbach’s research interests focus on the effects of combat stressors, both psychological and physical, on neuropsychological function. He is currently the principal investigator for a VA-funded study, a multisite investigation of group cognitive rehabilitation outcome. Dr. Storzbach also collaborates on other research with VA and OHSU investigators, particularly at VAPORHCS’s PTSD Clinical Team, VAPORHCS’s Imaging Service, VAPORHCS’s Epilepsy Center of Excellence, VAPORHCS’s National Center for Rehabilitative Auditory Research, and OHSU’s Center for Research on Occupational and Environmental Toxicology. He enjoys travel, hiking, and dining with his family in the Pacific Northwest.
Sarah Súñiga, Ph.D., Staff Psychologist for the PTSD Clinical Team and the Substance Abuse Treatment Program, VAPORHCS. Dr. Súñiga received her doctorate from Kent State University in Clinical Psychology with a Health Psychology emphasis. She completed her internship at VAPORHCS in 2007 and remained to complete postdoctoral training in PTSD. Dr. Súñiga became a staff psychologist in 2009, focusing on PTSD and comorbid Substance Use Disorders, working with both the PTSD Clinical Team and Substance Abuse Treatment Program. Her clinical work is focused on providing assessment and treatment of comorbid PTSD/SUD. Additionally, Dr. Súñiga is a Prolonged Exposure consultant for the National Center for PTSD, providing consultation to mental health providers throughout VA to implement PE. Her clinical interests include cognitive-behavioral therapy for PTSD, particularly PE and Cognitive Processing Therapy, and mindfulness-based approaches, including Acceptance and Commitment Therapy.

Malinda Trujillo, Ph.D., Staff Psychologist for the Vancouver Mental Health Team, VAPORHCS. Co-Chair, Multicultural and Diversity Committee, VAPORHCS. Dr. Trujillo received her doctorate from Colorado State University in 2008 after completing her pre-doctoral internship at the Greater Los Angeles VA Ambulatory Care Center (VA-LAACC). After receiving her degree, she completed her postdoctoral training in PTSD at the North Florida/South Georgia Veterans Health Care System in 2009. Dr. Trujillo joined the VAPORHCS in 2009. She is currently a staff psychologist for the Vancouver Mental Health Team. Her areas of interest include evidence based treatment for PTSD, anxiety, mood disorders, dual diagnosis treatment, Latino psychology, and multicultural psychology. She serves on the VAPORHCS Psychology Training Committee, Multicultural and Diversity Committee, and the National VA Psychology Training Council Multicultural and Diversity Committee. She is a VA Regional Trainer for Unconscious Bias.

Saw-Myo Tun, Ph.D., Research Psychologist, Neuropsychology Service and PTSD Clinical Team, VAPORHCS. Dr. Tun received her doctorate from Michigan State University and completed her internship and a two-year polytrauma postdoctoral fellowship at VAPORHCS. Her clinical and research interests include the psychological and cognitive effects of blast exposure, cognitive rehabilitation for Veterans with mild TBI, individual and couples treatment of Veterans with comorbid PTSD and cognitive difficulties, and geriatric neuropsychology. Her non-work interests include exploring the Pacific Northwest, reading good books, and learning to rock climb.

Amy Wagner, Ph.D., Staff Psychologist for the PTSD Clinical Team, VAPORHCS. Associate Professor of Psychology in the Department of Psychiatry, OHSU. Dr. Wagner received her doctorate in clinical psychology from the University of Washington in 1995 and completed a postdoctoral fellowship at the National Center for PTSD, Women’s Division, at the Boston VAMC in 1997. Since that time she has held faculty positions at the University of Wyoming and the Department of Psychiatry & Behavioral Sciences at the University of Washington. Dr. Wagner joined the Vancouver division of VAPORHCS in September 2005. She has clinical expertise in cognitive-behavioral therapy for PTSD and anxiety disorders more generally, as well as Dialectical Behavior Therapy. She has research interests in treatment development and evaluation, emotion regulation, and treatment dissemination. Through a VA Merit grant she is currently examining the effectiveness and acceptability of Behavioral Activation Therapy for the early treatment of PTSD and depression among Veterans who served in Iraq and Afghanistan.

Kate Woodside, PhD., Staff Psychologist for Rural Mental Health Initiative, VAPORHCS. Dr. Woodside received her doctorate in Counseling Psychology from the State University of New York at Buffalo in 2008. Her postdoctoral training with the VAMC Baltimore,
Maryland was focused to treating Veterans with Posttraumatic Stress Disorder and Traumatic Brain Injury returning from Iraq and Afghanistan. She joined VAPORHCS in 2009 to help establish the Rural Mental Health program and expand access to VA care for underserved Veterans through the use of telehealth and electronic innovations. Dr. Woodside is involved in research projects and partnerships which emphasize clinical application and accessibility of technology, with special focus to meeting the mental health needs of Veterans and their families through evidence-based psychotherapies delivered via webcam into Veterans’ homes. Dr. Woodside also serves on VAPORHCS’s Psychology Training Committee, Women’s Behavioral Health Advisory Committee, and Military Sexual Trauma Task Force.

Current Staff Research Activities

The VA values research for its role in improving patient care and attracting high quality clinical providers and scientific staff. VAPORHCS currently ranks 11th among VA organizations in overall grant support from the Department of Veterans Affairs. Currently, more than 172 staff at this VA are Principal Investigators involved in more than 535 active medical and behavioral science research projects. The VAPORHCS research community is supported by $33 million in VA, National Institutes of Health (NIH), Department of Defense (DoD) and other funding sources in FY2014.

While the primary focus of the internship is on clinical training and professional development, involvement in research activities is encouraged and nurtured. A number of staff welcome intern involvement in ongoing research including grant preparation, data collection, data analysis, and manuscript preparation. Interns may have opportunities to co-author publications and professional presentations. Interns especially interested in developing research careers can take advantage of many resources associated with this VA’s close ties to OHSU, which is literally connected to the VA by a sky bridge. Most VA psychologists hold academic appointments at OHSU, which hosts a medical school and other health science programs.

Recent Staff Publications and Presentations

The following is a sampling of recent publications and presentations by psychologists who provide clinical supervision to interns.

Applying to the VA Portland Health Care System Internship

Selection Process

The application and selection process has been designed to comply with the policy developed by the Association of Psychology Postdoctoral and Internship Centers (APPIC) with respect to internship offers and acceptances. This internship site abides by the APPIC policy that prohibits the communication, solicitation, acceptance, or use of ranking-related information prior to the release of the Match results.

VAPORHCS encourages applications from individuals with diverse backgrounds and with a variety of experiences. As an equal opportunity training program, the internship welcomes and strongly encourages applications from all qualified candidates, regardless of racial, ethnic, religious, sexual orientation, disability, or other minority status.

In the selection process, several criteria are considered:

- Clinical experience, including amount and diversity
- Scholarly preparation, indicated by the academic transcript, research experience and productivity, presentations or publications, and teaching experience
- Evidence of personal maturity and significant life experience
- The fit between the applicant’s stated objectives and VAPORHCS offerings

A member of the psychology staff evaluates each completed application. After this initial review, a cut is made, and the top applications are evaluated a second time by the Training Committee. In order to facilitate planning for internship site visits, applicants will be informed by e-mail as soon as possible whether or not they remain under consideration after the initial review. Generally, notification is made by early to mid December. For the 2015-2016 academic year, we received 182 completed applications and invited 48 applicants to attend the Open House.
Application Procedures and Checklist

All materials must be submitted on or before November 2, 2015 through the online AAPI.

- AAPI online application (www.appic.org)

VAPORHCS requires a site-specific cover letter to be submitted through the online AAPI:

- A brief (1 to 2 pages) statement of interest, specifically highlighting relevant issues of cultural competence, by addressing the following:
  
  - What stimulated you to study psychology?
  - What life experiences have influenced you professionally and personally?
  - What kinds of therapies have you employed and how would you characterize your theoretical orientation?
  - How do you incorporate cultural competency into your conceptualizations, and how do you hope to grow as a culturally competent practitioner during your internship year?
  - What are your interests and goals for the internship and beyond?
  - Why did you apply to VAPORHCS?

Please enter this statement as your cover letter for VAPORHCS in your online AAPI. We do not evaluate the standard AAPI essays, and we do not require any supplemental materials other than the completed AAPI. Your completed AAPI should also include graduate transcripts, your CV, and 3 letters of recommendation.

VAPORHCS Internship’s APPIC Match Number: 152711

For questions about the accreditation, you may contact:
American Psychological Association
Office of Program Consultation and Accreditation
750 First Street, NE • Washington, DC • 20002-4242
Phone: 202-336-5979 • TDD/TTY: 202-336-6123
Fax: 202-336-5978 • Email: apaaccred@apa.org
http://www.apa.org/ed/accreditation/
Open House

We do not offer individual interviews as part of our selection process. An invitational day-long Open House will be held on Thursday, January 7, 2016 to acquaint finalist candidates with the internship program. Applicants who remain under consideration after the initial review of their application will receive an invitation in early to mid December. At the Open House, staff psychologists, fellows, and current interns will describe the training experiences offered and will be available to answer questions. Small break-out groups with current interns and/or staff supervisors provide an opportunity for candidates to learn about and communicate specific training interests. The Open House serves as the final part of our review of candidates for internship, providing an opportunity for our staff and interns to learn more about you. Changes may be made to the working list of rankings based on Open House impressions. Candidates are strongly encouraged to attend the Open House to obtain the most information about our site and to meet our staff in person. If you are unable to attend the Open House, we may be able to arrange for you to talk briefly with a staff member or an intern on another date. This option is not always feasible and is subject to staff and intern availability.

Applicants selected for internship at VAPORHCS will be asked to submit two sample psychological assessment reports during the summer prior to beginning internship.

Questions about the program or the application process should be addressed to:

Marilyn Huckans, Ph.D., Director of Training for Psychology
Psychology Internship (P3MHN)
